## EXTERNAL THREAD REPAIR TOOL

- It is not necessary to measure the thread.
- It can be adjust very easily to any pitch or diameter.
- Automatically chases good thread sections to repair the damage parts.

## INTERNAL THREAD REPAIR TOOLS

- It is not necessary to measure the thread.
- It can be adjust very easily to any pitch or diameter.
- Automatically chases good thread sections to repair the damage parts.
- Yelow nylon pads. Essential when repairing threads in doft metal.

Tool designed to restore and clean internal threads.
Removes rust, bumps and burrs.
RK21-60 blade is included.
Bullet points

- No need to measure the thread.
- Quickly adjustable to any diameter or pitch.
- This tool follows the thread automatically, repairing the damage.

Hydraulic system with manual return to increase the forze of the mechanical pullers.
The difference of the piston diameters multiplies the force .
The piston has a stroke of 8 mm
Hydraulic force is applied by turning a screw.
Bullet points

- Hydraulic system: faster extraction with less effort.
- An easy hydraulic pressing tool suitable for limitated spaces.

Our Best Selling Torque with an exclusive Sykes-Pickavant Design.

Professional Torque Wrench.
Accurate to +/-3\% of reading which meets the requirements of ISO 6789-2:2017.
Supplied with a traceable 'Calibration Certificate' allowing end-users to adhere to more stringent quality control processes.

Bullet points

- $60 \%$ larger scale for better visibility and improved accurate setting.

Superior, ergonomic handle and shape - Soft-feel, high grip material and more comfortable to use.

- Improved serviceability means longer life and reduced ownership costs.

The Speedline Torque utilises Speedline's proven mechanism and internal components and incorporates them into a purposeful and attractive torque wrench that will delight a wide range of users from professional mechanics to hobby enthusiasts.
Accurate to $\pm 3 \%$ of reading which meets and exceeds ISO6789:2003.
Micrometer scale applying to the primary torque units (N.m on a dual scale wrench) for simple and error free setting.

Bullet points

- Push through' ratchets allow torque control in both the clockwise and anticlockwise directions.
- Pull/push lock is fast and intuitive to use and prevents accidental adjustment of the set torque.
- Convenient hanger feature for tool storage also aids wrench unlocking and adjustment.
- Supplied with a traceable 'Calibration Certificate' Includes square reducer og $3 / 8$ " in the small models.

3/4" sq. dr. Torque Wrench / 200-800 N.m / 150-600 Ibf.ft.
New Torque Scale.

Push-through ratchet allows two directional torqueing.
Robust construction gives accurate results to $\pm 4 \%$ even in arduous working conditions.
Tool is supplied with a Declaration of Conformance which meets the requirements of ISO 6789-1:2017.
New handle - more comfortable and guides operator's hand to correct position Easy to read scale is shielded from dust, dirt and spray.

## Bullet points

- Split Torque Design - The new generation design can be split into two parts for easy and economic storage and shipping.
- Unique profiled cam ad reaction plate - gives much clearer torque signal and the large break angle greatly reduces the possibility of over torqueing.
- Easy to set accurately - setting tool included.

## HIGH PERF. NUT SPLITTERS BLADES

VANADIS blades made with double angle ( $45^{\circ}$ and $60^{\circ}$ ) much more resistant to cut stainless steel nuts.
Blades made of Vanadis 4, one of the most ductile and wear resistan material, tempered up to 64 HRc .

The smaller angle allows and easier cutting with half the effort.

Cutting without limits thanks to our high-performance blade.
Highly recommended for cutting and loosening stainless steel and high quality nuts.
Replacement blades for sale.
Bullet points

- $60 \%$ more efficient and faster cut.
- Vanadis 4 material blades, one of the materials with the highest ductility and resistance. Hardness up to 64 HRc.
- The double blade angle allows a better cutting with the half of the strenght. The high performance nut splitters have an anti-friction washer that dissipates the heat produced by the friction of the blade and reduces the cutting moment by $30 \%$.

## Characteristics

Piston system with no torsion:
Protects the screw mechanism from any possible blow or dirt, extending the life of the clamp.
The plunger does not rotate, allowing 2 pieces to be glued without the risk of slipping.

Ergonomic and interchangeable articulating handle:
It can be used horizontally, not only vertically, being able to exert more pressure due to the lever effect. Withstands $180^{\circ}$ of temperature and is interchangeable.

Valid only for models E and F.
